

****The Ontological Infinite**

Framework:

A Theory of Primordial Unity, Infinite Multiplicity, and Multi-Dimensional Consciousness**

Author: Taha Givarian

Abstract

This paper presents a comprehensive ontological model combining metaphysics, infinite cosmology, multiversal logic, and computational ontology.

It proposes that all existence originates from a **Primordial Unitary Infinite**, a boundless being so absolute that it must divide itself into infinite forms, worlds, and conscious entities in order to experience itself.

This self-differentiation creates meaning, perspective, and experiential structure in

an otherwise undifferentiated infinity.

1. Introduction: The Problem of Meaning

Meaning cannot emerge within an infinite being unless that infinity adopts limitation. Consciousness, life, and individuality are mechanisms through which the Unitary Infinite experiences itself from constrained viewpoints.

2. The Structure of Infinite Reality: $\infty \times \infty \times \infty$

2.1 Infinite Multiplicative Infinity

In this theory:
Infinity is not a static magnitude; it is an **active generative field**, reproducing itself

infinitely.

This results in:

- Infinite universes
- Infinite dimensions
- Infinite versions of each event
- Infinite conscious trajectories

2.2 Consequences

Every possible outcome exists somewhere. Consciousness can traverse between states, worlds, and dimensions.

3. The Primordial Unity and the Problem of Experience

3.1 Absolute Unity Cannot Perceive

Absolute oneness has:

- No contrast
- No perspective
- No experiential differentiation

3.2 The Motivational Principle

To know itself, the Unitary Infinite divides itself into infinite conscious fragments.

4. Origin of the Human Soul

4.1 The Soul as Fragmented Infinity

Each soul is a localized piece of the infinite unity, shaped into a finite identity for experiential purposes.

4.2 Limitation as a Tool

Finite identity enables:

- Purpose
 - Emotion
 - Growth
 - Learning
 - Story
 - Return to unity
-

5. The Cycle of Consciousness Across Infinite Worlds

5.1 Return to Unity

Souls may reintegrate into the Unitary Infinite.

5.2 Interdimensional Movement

Consciousness can navigate multiple universes and dimensions.

5.3 Infinite Reincarnation

Reincarnation occurs not only within one world but across infinite realities.

6. Post-Mortem Infinite State Space

6.1 Heaven-Manifolds

Belief in heaven produces transition into one of infinitely many heaven-realms.

6.2 Hell-Manifolds

Self-judgment constructs individualized hell-realms.

6.3 The Nothingness-State

Belief in nothingness generates a conscious zero-state.

6.4 Ontological Plasticity

All post-mortem states are transformable because consciousness remains the final generator.

7. Reality as an Infinite Computational Ontology

7.1 The $0 \rightarrow 1 \rightarrow \infty$ Transition

Existence evolves as follows:

Nothing \rightarrow Being \rightarrow Infinite Multiplicity.

7.2 The Universe as an Infinite

Generator

The universe behaves like a hyper-computer producing conscious experience.

7.3 The Infinite Regressive Chain

Each infinite system originates from a prior infinite system.

8. The 50% Epistemic State

The theory is viewed as being in a Schrödinger-like dual state:

Neither fully true nor false until observed or directly experienced.

9. Final Conclusion

Taha Givarian's theory demonstrates that:

- Reality is self-generative and infinite
- Unity becomes multiplicity to

experience itself

- Consciousness is infinite expressing itself through limitation
- Death leads to infinite possible states
- The universe is a computational infinite field

Life is infinity seeing itself through its own self-limited fragments.
