

Complete List of 98 Solved Paradoxes (Super Simple English, for Everyone)

****Intro for Everyone:****

Imagine every paradox is like a ****locked door in a small house**** (normal world). In this model, the lock is ****real in that house****, but since all houses are in an ****infinite city****, there's always a ****hidden key**** or ****back door**** to another house. Consciousness is like the ****person with all the keys****, connected to the "big city."

Now, one by one, with everyday examples:

**Category 1: Word Locks (Logic) - 15 Paradoxes**

****1. Liar Paradox****

****Simple Example:**** Someone says, "I'm lying!" If true, it's a lie. If a lie, it's true.

****Solution:**** In small house (everyday

words), it's locked. In infinite city, big mind (consciousness connected to unity) sees it's just a word game and walks past it.

****2. Russell's Paradox****

****Simple Example:**** "List of all lists that don't include themselves"—does it include itself?

****Solution:**** Small house lock for lists. In city, "big list" (unity) includes everything, lock opens.

****3. Barber Paradox****

****Simple Example:**** Barber shaves everyone who doesn't shave themselves. Does he shave himself?

****Solution:**** Self-loop lock. Infinite mind redefines "shave" and done!

****4. Knower Paradox****

****Simple Example:**** "No one knows this sentence."

****Solution:**** Knowledge loop. In infinite

city, everything is known—this is just a corner.

****5. Yablo's Paradox****

****Simple Example:**** Infinite sentences, each calling the next ones lies.

****Solution:**** Infinite tangle lock. Infinite city sees the whole chain as one config and absorbs it.

****6. Bhartrhari Paradox****

****Simple Example:**** "This word has no name."

****Solution:**** Name lock. Big mind ignores names.

****7. Kleene Paradox****

****Simple Example:**** Sentence that can't be proven.

****Solution:**** Proof lock. Infinite city sees proof in layers.

****8. Hooded Man****

****Simple Example:**** "I know my brother, not that hooded man."

****Solution:**** Knowing lock. In city, everything connects.

****9. Hilbert-Bernays****

****Simple Example:**** Sentence about itself unprovable.

****Solution:**** Self-lock. City key of layers.

****10. Quine's Paradox****

****Simple Example:**** Quote before it lies.

****Solution:**** Quote lock. City sees words as config.

****11. Grelling-Nelson****

****Simple Example:**** "Heterological" is it heterological?

****Solution:**** Category lock. City includes all categories.

****12. Crocodile Paradox****

****Simple Example:**** Crocodile eats baby

unless parent predicts it won't.

Solution: Condition lock. Infinite city skips the condition.

13. Unexpected Hanging

Simple Example: Hanging on last unexpected day.

Solution: Time lock. City sees time as infinite.

14. Protagoras Paradox

Simple Example: Student right, teacher wrong.

Solution: Learning loop. City sees knowledge in layers.

15. Epimenides Paradox

Simple Example: "All Cretans are liars."

Solution: Group lock. Big view key.

Category 2: Number Locks (Math/

Infinity) - 25 Paradoxes**

16. Zeno's Dichotomy

Simple Example: To reach wall, first half, then quarter—infinite pieces!

Solution: Small house: infinite pieces lock. Infinite city: whole path is one big step.

17. Achilles & Tortoise

Simple Example: Achilles never catches tortoise, always a bit behind.

Solution: Infinite tiny bits. City sees whole race at once.

18. Hilbert's Hotel

Simple Example: Infinite hotel full, how add new guest?

Solution: Natural for infinite city. Big mind shifts everyone.

19. Galileo's Paradox

Simple Example: Infinite numbers,

infinite squares, but fewer squares!

Solution: Different infinities. City makes ratios meaningless.

20. Cantor's Paradox

Simple Example: Every list of numbers has a new number outside it.

Solution: Stronger infinity. Unity has all levels.

21. Burali-Forti

Simple Example: Biggest infinite number?

Solution: Infinite ladder. City is beyond.

22. Banach-Tarski

Simple Example: One ball into two same-size balls.

Solution: Infinite twists. Unity redefines volume.

23. Ant on Rope

****Simple Example:**** Ant on stretching rope never finishes.

****Solution:**** Speed + stretch. Key is approximation.

****24. Ross Paradox****

****Simple Example:**** Add/remove infinite balls, box empty.

****Solution:**** Labels matter. City sees content.

****25. Thomson's Lamp****

****Simple Example:**** Lamp infinite on/off, final state?

****Solution:**** Infinite sequence.
Consciousness picks state.

****Category 2: Number Locks (Math/Infinity) - Continued (26-40)****

****26. Potato Paradox****

****Simple Example:**** Potato weighs less after cooking, but no water lost?

****Solution:**** Small house: weight confusion lock. Infinite city sees volume vs mass—water rearranges inside, no loss.

****27. Interesting Number Paradox****

****Simple Example:**** Almost all numbers are boring, so there must be an interesting one!

****Solution:**** Small house: definition lock. Infinite city has infinite interesting numbers—boring ones are local configs.

****28. Cramer's Paradox****

****Simple Example:**** Primes seem random, but follow strict rules.

****Solution:**** Small house: pattern vs chaos. Infinite city sees primes as infinite harmony in unity.

****29. Elevator Paradox****

****Simple Example:**** Elevator floors average out weirdly.

****Solution:**** Small house: probability lock.

Big mind averages infinite floors at once.

****30. Berry Paradox****

****Simple Example:**** "The smallest number not nameable in under 10 words" is named in 10 words.

****Solution:**** Small house: self-reference lock. Infinite city redefines "nameable" in higher levels.

****31. Berry-Smith Paradox****

****Simple Example:**** Smallest uncomputable number computable by description.

****Solution:**** Small house: computation loop. Infinite unity computes beyond local machines.

****32. Skolem Paradox****

****Simple Example:**** Countable models of uncountable sets.

****Solution:**** Small house: size mismatch. Infinite city sees all as subsets of unity.

****33. Goodstein Paradox****

****Simple Example:**** Infinite sequence reaches zero despite growing huge.

****Solution:**** Small house: infinity growth. Infinite city absorbs all sequences.

****34. Antimomy of the Continuous****

****Simple Example:**** Continuous space discrete or infinite points?

****Solution:**** Small house: continuity lock. Unity holds both as configs.

****35. Arrow Paradox (Zeno)****

****Simple Example:**** Arrow in flight is frozen at every instant.

****Solution:**** Small house: instant lock. Infinite city flows time as whole.

****36. Stadium Paradox (Zeno)****

****Simple Example:**** Runners seem to move and not move.

****Solution:**** Small house: relative motion.

Big view unifies perspectives.

****37. Dichotomy Paradox (Zeno)****

****Simple Example:**** Infinite halves before starting.

****Solution:**** Infinite city sums halves to whole path.

****38. Achilles Paradox (Zeno)****

****Simple Example:**** Never catches up.

****Solution:**** Convergence in infinite view.

****39. Burali-Forti (full)****

****Simple Example:**** Largest ordinal impossible.

****Solution:**** Unity transcends ordinals.

****40. Thomson Lamp (detailed)****

****Simple Example:**** On/off infinite times—what's final?

****Solution:**** Consciousness selects state in infinite sequence.

Category 3: Chance Locks (Probability/Decision) - 41-60

41. Monty Hall Problem

Simple Example: 3 doors, 1 car. Host opens goat, switch? 66% win.

Solution: Small house: door choice lock. Infinite mind sees all probabilities, picks best.

42. Birthday Paradox

Simple Example: 23 people, 50% chance shared birthday.

Solution: Small house: combo explosion. City sees infinite combos as normal.

43. Two Envelopes Paradox

Simple Example: Envelope A has X , B has $2X$ or $X/2$ —always switch?

****Solution:**** Small house: expectation trick. Infinite view balances infinite cases.

****44. St. Petersburg Paradox****

****Simple Example:**** Coin flips till heads— infinite expected win, pay little?

****Solution:**** Small house: infinite sum. Unity caps real value.

****45. Bertrand's Box Paradox****

****Simple Example:**** 3 boxes (gold/gold, gold/silver, silver/silver). Pick gold label, 50/50 inside? Actually $1/3$.

****Solution:**** Conditional probability. Infinite mind tracks all labels.

****46. Proebsting's Paradox****

****Simple Example:**** Kelly criterion fails in some bets.

****Solution:**** Infinite games. City optimizes long-run.

****47. Lottery Paradox****

****Simple Example:**** Rational to believe each ticket loses, irrational all lose.

****Solution:**** Belief degrees. Infinite unity weighs all rationally.

****48. Newcomb's Paradox****

****Simple Example:**** Predictor fills boxes. Take one or both?

****Solution:**** Infinite predictors. Consciousness aligns with best prediction.

****49. Sleeping Beauty****

****Simple Example:**** Wake on Monday/Tuesday if heads. Probability of heads?

****Solution:**** Infinite awakenings. Big view counts all equally.

****50. Doomsday Argument****

****Simple Example:**** You're average human, so humanity ends soon.

****Solution:**** Infinite humans possible. Unity sees all timelines.

****51. Simpson's Paradox****

****Simple Example:**** Treatment seems better in each group, but worse overall.

****Solution:**** Small house: group data lock. Infinite city sees full combined picture, reverses trend.

****52. Boy or Girl Paradox****

****Simple Example:**** "I have two kids, at least one boy." Chance other is boy? $1/3$, not $1/2$.

****Solution:**** Small house: info lock. Big mind counts all families equally.

****53. Three Prisoners Problem****

****Simple Example:**** 3 prisoners, 1 freed. Guard names survivor. Switch? $2/3$ win.

****Solution:**** Conditional chance. Infinite view tracks all names.

****54. Two Child Problem****

****Simple Example:**** Tuesday Boy twist on

boy/girl.

Solution: Rare events. City weighs infinite days.

55. False Positive Paradox

Simple Example: 99% accurate test, 1% disease—positive likely false.

Solution: Base rate lock. Infinite population balances it.

56. Prosecutor's Fallacy

Simple Example: 1/1M DNA match = 99.9999% guilty (wrong).

Solution: Small house: stats mixup. City separates match from guilt.

57. Lindley's Paradox

Simple Example: Large sample rejects small effect.

Solution: Infinite data. Unity weighs evidence properly.

58. Borel's Paradox

****Simple Example:**** Rotating points
probability undefined.

****Solution:**** Measure choice. Infinite city
picks invariant view.

****59. Letting Go Paradox****

****Simple Example:**** Optimal stopping
seems wrong.

****Solution:**** Infinite choices.
Consciousness finds sweet spot.

****60. Parrondo's Paradox****

****Simple Example:**** Two losing games
together win.

****Solution:**** Local loss, global gain.
Infinite play reveals pattern.

**## **Category 4: Physics Locks (Universe
Weirdness) - 61-75****

****61. Schrödinger's Cat****

****Simple Example:**** Cat in box both alive and dead till looked.

****Solution:**** Small house: quantum weird. Infinite city sees both worlds parallel; you pick one.

****62. EPR Paradox****

****Simple Example:**** Two particles linked—measure one, other instantly changes far away.

****Solution:**** Small house: spooky action. Unity connects everything anyway.

****63. Olbers' Paradox****

****Simple Example:**** Infinite stars = bright night sky. Why dark?

****Solution:**** Small house: infinite light. City limits speed/age/universe size.

****64. Norton's Dome****

****Simple Example:**** Ball on dome stays or rolls—no reason.

****Solution:**** Small house: physics break.

Infinite paths; mind chooses.

****65. Bell's Theorem****

****Simple Example:**** Quantum beats local realism.

****Solution:**** Unity non-local by nature.

****66. Black Hole Information Paradox****

****Simple Example:**** Info falls in black hole, lost forever?

****Solution:**** Infinite city holograms info on edge.

****67. Ehrenfest Paradox****

****Simple Example:**** Spinning disk length contracts weirdly.

****Solution:**** Relativity local; unity reconciles frames.

****68. Ladder Paradox****

****Simple Example:**** Ladder fits barn from one view, not other.

****Solution:**** Infinite frames; both true

relatively.

****69. Stokes' Paradox****

****Simple Example:**** Cylinder drag impossible in steady flow.

****Solution:**** Small house math fail. Infinite turbulence resolves.

****70. Tea Leaf Paradox****

****Simple Example:**** Tea leaves gather center when stirred.

****Solution:**** Secondary flows. Unity sees hidden patterns.

****71. Twin Paradox****

****Simple Example:**** Traveling twin younger.

****Solution:**** Acceleration breaks symmetry; infinite paths explain.

****72. Fermi Paradox****

****Simple Example:**** Where are all aliens?

****Solution:**** Infinite space; unity hides or

spaces them.

****73. Grandfather Paradox****

****Simple Example:**** Kill grandpa, never born?

****Solution:**** Infinite timelines branch.

****74. Bootstrap Paradox****

****Simple Example:**** Info from future to past loops.

****Solution:**** Unity self-consists across loops.

****75. Predestination Paradox****

****Simple Example:**** Do exactly what seen in future.

****Solution:**** Local loop, infinite choices outside.

ادامه بده

**## **Category 5: Mind & Life Locks
(Philosophy/Human Weirdness) - 76-98****

****76. Free Will Paradox****

****Simple Example:**** Universe like clockwork machine—where's your choice?

****Solution:**** Small house: local rules lock you. Infinite city: consciousness connected to unity always has infinite doors out.

****77. Ship of Theseus****

****Simple Example:**** Replace all ship planks—is it still same ship?

****Solution:**** Small house: identity changes. Infinite city: unity sees whole history as one flowing config.

****78. Sorites Heap****

****Simple Example:**** One grain no pile, add one by one—when pile?

****Solution:**** Small house: fuzzy edge. Infinite mind draws lines at any level.

****79. Hard Problem of Consciousness****

****Simple Example:**** How dead matter makes feelings?

****Solution:**** Small house: brain mystery. Unity: consciousness fundamental, matter is just body/shape.

****80. Buridan's Ass****

****Simple Example:**** Donkey equidistant two haystacks, starves choosing.

****Solution:**** Small house: perfect tie. Infinite paths; mind breaks tie somehow.

****81. Fitch's Paradox of Knowability****

****Simple Example:**** All truths knowable implies all known.

****Solution:**** Local knowledge limits. Infinite unity knows all layers.

****82. Moore's Open Question****

****Simple Example:**** "Good" always open question, not definable.

****Solution:**** Small house: value mystery. City experiences all goods infinitely.

****83. Meno Slave Boy****

****Simple Example:**** Slave solves geometry never taught—knowledge innate?

****Solution:**** Unity remembers all; local minds rediscover.

****84. Problem of Other Minds****

****Simple Example:**** How know others conscious like you?

****Solution:**** Infinite city connects all inner views.

****85. Spectrum Argument****

****Simple Example:**** Colors gradual, no sharp red/orange line.

****Solution:**** Infinite gradients; unity draws boundaries per level.

****86. Unexpected Hanging (detailed)****

****Simple Example:**** Hanged last day you don't expect it.

****Solution:**** Backward logic loop. Infinite time skips expectation.

****87. Crocodile (detailed)****

****Simple Example:**** Predict right or eat baby.

****Solution:**** Self-reference condition. City ignores trick.

****88. Protagoras (detailed)****

****Simple Example:**** Teaching makes right, but contradicts teacher.

****Solution:**** Knowledge layers stack infinitely.

****89. Epimenides (detailed)****

****Simple Example:**** Liar says all liars.

****Solution:**** Group self-ref. Infinite view steps out.

****90. Theseus variants****

****Simple Example:**** Two ships from planks—which real?

****Solution:**** Unity tracks all versions parallel.

****91. Sorites variants****

****Simple Example:**** Bald man hair by hair.

****Solution:**** Arbitrary lines in infinite spectrum.

****92. Heap variants****

****Simple Example:**** When mountain from dirt?

****Solution:**** Consciousness defines thresholds.

****93. Tolerance Paradox****

****Simple Example:**** Tolerate intolerant destroys tolerance.

****Solution:**** Local rule vs infinite balance.

****94. Liar variants****

****Simple Example:**** Strengthened liar loops.

****Solution:**** Meta-language in infinite city.

****95. Grelling variants****

****Simple Example:**** Autological/
heterological mess.

****Solution:**** Words as local configs.

****96. Knowledge variants****

****Simple Example:**** Lottery knowledge
beliefs.

****Solution:**** Degrees in infinite
possibilities.

****97. Decision variants****

****Simple Example:**** Newcomb one/two
box.

****Solution:**** Predict across infinite
predictors.

****98. Self variants****

****Simple Example:**** Ship, person identity
over time.

****Solution:**** Unity flows through all changes.

Complete List of ****Self-Created Paradoxes**** in my Model (and Their Resolutions)

****1. Inescapable World Paradox****

****Simple Summary:**** Can a world exist with **no way out at all**?

****Why Hard:**** If consciousness is inside, how's it truly absolute lock? If not, no real threat?

****Resolution:**** Truly no-input/no-output world = isolated self-consciousness, no one enters. If consciousness enters = it **is** the exit channel (linked to unity).

****Lock without key is self-contradictory.****

****2. Input-Only-No-Output Paradox****

****Simple Summary:**** World lets

consciousness in, but no way back out.

****Why Hard:**** Entry means connection—
how block exit completely?

****Resolution:**** Consciousness entry =
channel opened; always linked to infinity,
so **possibility** of exit exists (even if hard).

****Input without output breaks its own
lock.****

**3. Lock-Without-Key Paradox**

****Simple Summary:**** A lock defined to
have **no key at all**.

****Why Hard:**** In infinity, how stay **truly**
impossible forever?

****Resolution:**** Your sentence: "Infinite
locks → infinite keys; even lock made
keyless faces key that opens any lock."
Consciousness linked to unity = ultimate
key.

4. Infinite Consciousnesses in Coercive World Paradox

****Simple Summary:**** World full of infinite partial consciousnesses coercing each other.

****Why Hard:**** If all coerce, who ever escapes?

****Resolution:**** Coerce or try escaping = both **active consciousness moves**. World shifts from "dead stasis" to "living tension," tension = change channel. ****Absolute coercion can't survive active consciousness.****

5. All-or-Nothing Consciousness Paradox

****Simple Summary:**** Either everything conscious (even rocks?) or only humans (where's the line?).

****Why Hard:**** Can't accept all or none

without issues.

****Resolution:**** Any coherent structure
can have intra-systemic consciousness;
infinite structures = infinite possible
consciousnesses. Infinite non-conscious
too, but all from original unity with
potential to awaken. ****Rock only knows
it's a rock, period.****

**## **6. Final Coercion in Neutral Infinity
Paradox****

****Simple Summary:**** Infinity neutral—how
allow fully coercive worlds?

****Why Hard:**** Neutrality shouldn't permit
"absolute evil."

****Resolution:**** Infinity neutral, so
coercions just ****local challenges****, not
universal law; linked consciousness
always holds escape key. ****Coercion
temporary; unity eternal.****

7. Self-Eating Sentence Paradox

****Simple Summary:**** "Infinite locks → infinite keys, even keyless lock opens."

****Why Hard:**** Sentence talks absolute lock but proves it's not!

****Resolution:**** Self-referential resolved; shows ****infinity builds and absorbs its own opposite.****

Theorist: Taha Givarian

Theory: infinit unity+ 777 thinking system.
